

Toughseal

- Long-lasting showroom shine**
- Quick and easy cleaning**
- No more waxing**
- Increase re-sale value**
- 5-Year Guarantee**

The future of paint protection

TOUGHSEAL PRE-TREATMENT STEP 1 & ACRYLIC SEALANT STEP 2

A 2 part process that gives all paintwork a diamond-hard shine and offers protection from most harmful elements including Ultra Violet Rays, Fading, Acid Rain, Peeling, Frost, Tree Sap, Insect Acid, Bird Droppings, Oxidation (chalking), Petrol and Diesel Fumes. Unlike old fashioned wax and silicone polishes, that break down under the sun's UV Rays, the protective effects of Toughseal are actually enhanced by the sun. The high gloss finish remains wash after wash and wax polishing is not required ever again. The high gloss Toughseal finish simply washes back time and time again.

HOW TOUGHSEAL PAINT SEALANT WORKS

When paint cures, entrapped solvents evaporate from the base layer up through the paint. When this occurs, sediment is left in the paint pores. All painted surfaces are exposed to a certain amount of sulphuric and nitric acids from the atmosphere. These cling to the paint in the forms of oxides. Toughseal's scientifically developed Pre-Treatment Step 1 enters the pores of the painted surface and effectively removes all foreign impurities. This now allows Toughseal's Acrylic P.T.F.E. Sealant Step 2 to bond chemically to the pores of the paintwork to seal and protect the now highly polished surface. As the treated surface cures, the P.T.F.E. molecules elongate, interlocking with each other, resulting in a tough bonded protective coating to the paint.

TOUGHSEAL FABRIC PROTECTOR

Treats synthetic fabrics including nylon, polyester, acrylic and their blends with natural cellulosic fibres. Toughseal's unique Fabric Protector formula adheres to every fibre of the materials used for upholstery and carpets, protecting against oil and water-based spills. Liquids simply 'bead up' on the surface of your upholstery making it simple to wipe away without leaving stains or dulling fabrics. Toughseal also reduces wear on fabrics and carpets by eliminating friction from trapped dirt particles between fibres.

TOUGHSEAL VINYL & LEATHER PROTECTANT

Protects and maintains all vinyl and leather interiors. Vinyl and leather upholstery and dashboards can be damaged by harmful sunlight. Cracking, fading and discolouring on vinyl and leather interiors will now be a thing of the past after using Toughseal's Vinyl & Leather Protectant. Simply wipe the treated surfaces with a clean, moist cloth on a regular basis to help maintain that showroom finish.

TOUGHSEAL DRY-WASH & SHINE

Is a waterless car wash and protective glaze that produces an armour-like 'invisible shield'. Dry-Wash & Shine does not contain wax, nor is it a polish and does not leave car paint work looking dull after use. Dry-Wash & Shine combines all the best features of waxes, polishes and paint sealants without any of the abrasive problems. It can even be applied over a dusty or dirty surface without leaving scratches. Dry-Wash & Shine combines specially formulated detergents, wetting agents, lubricants and sealing compounds that soften and emulsify grime whilst lubricants attach a microscopic bonded layer that produces a shiny protection.
